C O S M O S

CONTEMPORARY SCI-FI, ADVENTURE 128 MIN

Three astronomers accidentally intercept a signal from a distant alien civilisation but the truth they uncover is more incredible than any of them dare to believe.

Inspired by 80s & 90s era adventure and set over one night, **COSMOS** is a contemporary sci-fi adventure exploring the thrilling first hours of **FIRST CONTACT**:

Professional space scientists by day, three friends park their mobile astronomy car on a lone hilltop for another night of amateur stargazing. But while scanning the airwaves, they uncover a faint coded message hiding in the static - what they believe is an alien signal.

Unable to authenticate their discovery with other astronomers, the men realise they are the sole witness to Mankind's greatest discovery. With their limited gear and sheer willpower, they now race to record, prove and share their breakthrough before it is lost forever. But the truth they uncover will change our world forever.

COSMOS offers spectacle and thrills, not against the backdrop of national government organisations, but through the eyes of three ordinary men who learn as much about themselves and each other as they do about our place in the Universe.

COSMOS is the debut feature film of British Writer/Director brothers, **Elliot & Zander Weaver**, who self produced and financed the project, taking on all major crew roles throughout production (with the exception of writing the score). The movie is complete and currently seeking distribution.

Previously Elliot and Zander have directed RTS Award recognised Space Science documentary films, still airing worldwide on **Discovery Europe/US, PBS, History Channel, Canal+, RaiTV and Amazon.**

Check out the **COSMOS** behind the scenes to discover how the movie was made.
